no. 369

SPACE SIGNALS

The Arkansas Democrat-Gazette, June 9, 1993, reported that the Berlekey, CR search for alien signals from outer space had found 164 possible signals. They are quick to admit that they have no concrete evidence for the signals coming from alien beings. The research team will work for the next year to determine if even one signal is from an alien civilization. At this time they seem to believe they will find a conventional explanation for each signal. The rumor on the street is that 20-30 of the signals are "most puzzling." We hope there won't be a bias towards finding other than an alien answer.

CLOSE ENCOUNTER IN CZECHOSLOVAKIA

The Detroit Free Press and the Kansas City Star both reported on the February 8, (or 9th, the papers do not agree) 1993 close encounter reported by Anna Sitarova near Jihlava. It was 8 pm when she and a friend were driving about a mile outside of the village of Zhor and the car began to sputter. It was then they saw a "dazzling light" about 100 yards from the right side of the car. She said "my legs and arms began to feel stiff. I couldn't stop the car. I felt like I was being compelled to follow." Next, the object shot to a spot on the highway about 100 yards in front of them. They described it as 5 feet long and 3 feet wide, floating about 12 feet above the pavement, emitting red light from its sides and bottom. They turned the car around and sought help. The inferred EM effects on the car and the driver are interesting, especially when it was noted that the object was 100 yards distant.

DRIVER FOLLOWED BY UFO

A Kenosha woman reported a UFO as large as 9 houses in early March. She said it was about 11 pm when she and her three children saw three saucer shaped objects over Lake Michigan. At the county line one of the objects came toward her and shined a bright light over her car. Some distance later it veered off to the west and disappeared.

OFFICERS RIDICULED FOR REPORTING UFO

Two police officers flying a helicopter reported a bizarre close encounter with a small UFO and their story was confirmed by two officers on the ground. They said the basketball sized object shot three baseball-sized fireballs directly at the helicopter from its center. They said they first chased and then dodged the pear-shaped object. they did the right thing and reported it, and then the tabloids had a field day. They should be proud of their honesty and forthrightness and say "so what!" to their detractors. It is time stop giving in to the ridicule factor and fight back.

METAL FROM CRASH???

The Jan 28, 1993 edition of the Hatch, NM *Courier* claims that a family from Albuquerque was hiking about 12 miles south of Horse Springs, NM last summer when they found a piece of metal they believe could be from the Roswell crash. The article claims they have tried to cut it, burn it, and bend it, and cannot. Very interesting.....

ANOTHER EXPERT SPEAKS!

According to the Las Cruces, NM *Sun-News* (May 27, 1993) Princeton University astrophysicist J. Richard Gott III has calculated that if we were ever going to be roaming the galaxy, we would be doing it already. In addition, he says that there is a 95% chance that the human species could perish between 5100 and 7.8 million years from now. His worst case scenario, however, is that it could all come to an end in 12 years. He suggests we listen to the warnings of some forthcoming ecological disaster. He says "We're not likely to be guaranteed a future that is vast compared compared with our past." Figures never lie.....(GIGO).

EVIDENCE OF LIFE IN SPACE IS FOUND

According to the *Houston Post* scientists at the University of Arizona have discovered the basic building blocks of life in the inner core of a rocky meteorite, confirming that chemicals common to biological systems can form in deep space. Their source of information is the Murchison meteorite that was found in Australia some 24 years ago. They have isolated traces of deuterium and nitrogen-15 with an isotopic composition of the same concentration that is typical of amino acids in terrestrial life. This means that the building blocks of life formed in interstellar space eons ago. A total of 55 amino acids have been found in the Murchison meteorite by researchers. Most UFO researchers would say "that doesn't surprise me."
